MagStation II™ NMR Selected for Basell Orlen's Polymer Lab in Poland

HAVERHILL, MA (September 28, 2007)—The first MagStation II™ laboratory NMR system destined for Poland for was shipped from the Progression factory in Massachusetts. This equipment, developed by Progression, will be used to provide non-destructive polyethylene and polypropylene resin analysis in the plant QC laboratory for key resin properties such as density, xylene solubles, ethylene content, and mechanical properties. The company is the world's leading supplier of lab NMR equipment to the polymer industry.

“Extending the supply of our NMR technologies in to growing Eastern European markets is an important opportunity for us,” remarked Scott Marino, President at Progression, Inc. “The professional staff at Basell Orlen have been great to work with this far, and we look forward to a close relationship together with them in the future.”

About Progression, Inc.

Progression, Inc. (www.progression-systems.com) has an extensive background in the development and implementation of process NMR and holds a broad intellectual property portfolio in its use and application. In addition, the company provides LIBS instrumentation, custom sampling systems, two-phase mass flow monitors and electrostatic charge measurement devices for monitoring unique applications within the chemical process industry. The world's largest polyolefin manufacturers rely upon Progression products to improve process efficiency and product consistency.

International business accounts for more than 60 percent of privately held Progression's overall revenues. Strong service and distribution in overseas markets including Europe, Asia, and the Middle East continue to provide exceptional expansion and growth opportunities for Progression.
