Progression Unveils Its Latest On-Line Analyzer, the Titan CCA

HAVERHILL, MA (September 14, 2009)—Progression, Inc. announces the completion of their newest product, the Titan CCA. It combines NMR and LIBS technology to provide complete coal analysis. The Titan CCA has been designed to allow coal miners, coal-fired generating stations and other industrial coal and coke users to increase productivity and efficiency as well as reduce greenhouse gas emissions.

The Titan CCA can be configured to offer basic information about the coal being burned, or to provide complete knowledge of the coal being burned. Basic measurements include moisture content and energy content. To provide more advanced data, the Titan CCA can be optimized to include parameters such as total carbon content, sulfur, total ash content and ash constituents without changing the footprint or disrupting plant operations.

Everett Kysor, Product Specialist, stated, “I find it very exciting that Progression combined innovative thinking with our prior experience in polymer analysis to produce an instrument as revolutionary as the Titan CCA.”

About Progression, Inc.

Progression, Inc. (www.progression-systems.com) has an extensive background in the development and implementation of process NMR and holds a broad intellectual property portfolio in its use and application. In addition, the company provides LIBS instrumentation, custom sampling systems, two-phase mass flow monitors and electrostatic charge measurement devices for monitoring unique applications within the chemical process industry. The world’s largest polyolefin manufacturers rely upon Progression products to improve process efficiency and product consistency.

International business accounts for more than 60 percent of privately held Progression’s overall revenues. Strong service and distribution in overseas markets including Europe, Asia, and the Middle East continue to provide exceptional expansion and growth opportunities for Progression.
